Domeinspecifieke leerresultaten van de opleiding:

Graduates

1. Demonstrate a systematic understanding of key areas of economic knowledge and their recent developments and interaction, as well as an active knowledge of the detailed features of economic problems in specific areas of specialization.
2. Have an active knowledge of analytical and up to date techniques and are able to apply them in the study of economic problems professionals face in their field of application.
3. Can critically reflect upon acquired knowledge, insights and skills in order to reformulate the understanding of the field and the ongoing debates, methods and findings of research.
4. Demonstrate the ability to pursue a research project from definition through planning, execution, interpretation and analysis of data to completed research report.
5. Are able to identify and structure complex economic problems into operational research questions, and make motivated research choices in order to formulate solutions.
6. Can formulate scientifically founded conclusions in the absence of complete data and can communicate these clearly to academic audiences both in writing and orally.
7. Translate research findings to concrete contexts and draw policy recommendations from research solutions.
8. Undertake independent learning required to advance their knowledge and understanding and to develop new skills for continuing their professional development in the area of economics..
